

Theme Documentation: Real Estate Business WordPress Theme

Download files here: <https://realestate.pridemasia.co.za/>

1. Introduction

Welcome to the documentation for Real Estate Business WordPress Theme. This theme is fully compatible with Elementor Pro, allowing users to design pages effortlessly.

Additionally, the theme utilizes Elementor Pro's Theme Builder to customize the header and other global elements. For property listings and other dynamic content, it integrates Advanced Custom Fields (ACF) and Custom UI Post Plugin to manage and display custom fields efficiently.

2. Installation

2.1 Upload & Activate the Theme

1. Download the theme zip file: realestatebusiness.zip.
2. Log in to your WordPress admin panel.
3. Navigate to Appearance > Themes > Add New.
4. Click Upload Theme and select realestatebusiness.zip.
5. Click Install Now, then activate the theme.

3. Restoring the Website Using UpdraftPlus

To restore the website on a new server using UpdraftPlus, follow these steps:

3.1 Install WordPress and UpdraftPlus

1. Install WordPress on the new server.
2. Log in to the WordPress admin panel.
3. Navigate to Plugins > Add New.
4. Search for UpdraftPlus WordPress Backup Plugin.
5. Install and activate the plugin.

3.2 Upload Backup Files

1. Download the backup files (theme, plugins, database, uploads, etc.).
2. Extract the .zip archive to access the individual backup files.
3. Navigate to Settings > UpdraftPlus Backups in WordPress.
4. Click on the Upload backup files tab.
5. Select and upload all extracted backup files.

3.3 Restore the Website

1. Once uploaded, go to the Existing Backups tab.
2. Select the latest backup and click Restore.
3. Choose what to restore:
 - Plugins
 - Themes
 - Uploads
 - Others
 - Database
4. Click Restore and wait for the process to complete.
5. After restoring, log out and log back into WordPress.

3.4 Update Database URLs

1. Access phpMyAdmin on your hosting panel.
2. Locate your WordPress database and open the wp_options table.
3. Find the siteurl and home fields.
4. Replace the old site URL with your new site URL.
5. Save the changes.

3.5 Update Elementor Links

1. Log in to your restored WordPress site.
2. Navigate to Elementor > Tools > Replace URL.
3. Enter the old URL and the new URL.
4. Click Replace URL and save changes.

3.6 Final Steps

1. Log in using the default credentials:
 - Username: admin
 - Password: admin
 2. Immediately update the username and password for security.
 3. Test the website functionality to ensure all elements are working correctly.
-

4. Theme Structure

my-custom-theme/

└─ style.css	# Main Theme Stylesheet
└─ functions.php	# Theme Functions
└─ index.php	# Main Template File
└─ header.php	# Header Section (Customized with Elementor Pro)
└─ footer.php	# Footer Section
└─ page.php	# Default Page Template

└── template-fullwidth.php # Full Width Page Template
└── 404.php # 404 Error Page
└── archive.php # Archive Page
└── assets/ # Images, CSS, JS
└── inc/ # Extra Theme Functions
└── screenshot.png # Theme Preview Image

5. Elementor Integration

5.1 Ensure Elementor Compatibility

The theme is fully compatible with Elementor Pro. The functions.php file includes:

```
function mytheme_elementor_support() {  
    add_theme_support('elementor');  
}  
  
add_action('after_setup_theme', 'mytheme_elementor_support');
```

This ensures Elementor can work without issues.

5.2 Using Elementor with Custom Templates

To use Elementor, create a new page and choose:

- Default Template → Standard layout
- Full Width Template → template-fullwidth.php for full-screen designs
- Header & Footer → Managed via Elementor Pro's Theme Builder
